EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with the attorney of record, Mirut Dalal (Reg. No. 44,052) on June 21, 2007 to correct minor informalities, clarify the scope of the claims, remove limitations not supported by the specification, and to put the application in condition for allowance.

The application has been amended as follows:

Claim 1: replaced "logic" in line 11 with --a logic--

Claim 1: replaced "memory controller" in line 24 with --requesting node--

Claim 2: replaced "logic" in line 6 with --a logic--

Claim 6: inserted --a-- before "numerically" in line 3

**7. (Currently Amended) The circuit of claim 2, wherein the logic further comprises:
a numerically controlled delay logic for receiving the read command, and for
transmitting a first signal after a first predetermined period of time after receiving the read
command and transmitting a second signal after a second predetermined period of time
after receiving the read command; and
an OR gate for transmitting the signal indicating the presence of a read transaction,**

wherein the OR gate further comprises:

a first input for receiving the first signal; and

a second input for receiving the second signal; and

~~wherein the AND gate receives the signal from the memory controller directly and the signal from the memory module directly and transmits the signal to the memory controller directly.~~

Canceled claims 11-16.

17. (Currently Amended) A circuit for transferring data from memory, said circuit comprising:

a memory controller, wherein the memory controller is operable to transmit a read request;

a memory module, wherein the memory module is operable to transmit data and a signal indicating transmission of the data from the memory module;

a logic connected to the memory controller, wherein the logic is operable to transmit another signal to the memory controller indicating the transmission of the data from the memory module, wherein the logic further comprises:

an AND gate connected to the memory controller, said AND gate operable to transmit the another signal to the memory controller after a time interval, wherein during the time interval, the AND gate receives the a signal from the memory controller and the signal indicating transmission of the data from the memory module; and

a printed circuit board connected to the memory controller, the memory module,

and the logic, wherein the printed circuit board is connected to transmit the read request to the memory module, and the printed circuit board is connected to transmit the signal indicating transmission of the data from the memory module to the logic.

18. (Currently Amended) The circuit of claim 17, wherein the logic further comprises:

a first numerically controlled delay logic;
a second numerically controlled delay logic connected to the first numerically controlled delay logic; and
an OR gate connected to the first numerically controlled delay logic and the second numerically controlled delay logic, and the OR gate is connected to the AND gate.

Claim 20: replaced “first printed circuit” in lines 3-4 with --printed circuit board--

Claim 20: replaced “data” in line 6 with --data from the memory module--

Cancel claim 21.
